Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

2. Claims 1-4 are rejected under 35 U.S.C. 102(e) as being clearly anticipated, with respect to claims 1 and 4, or anticipated, with respect to claims 2 and 3, by Crismore et al. (US 5,997,817).

Addressing claim 1, for the base plate, electrode system, and claimed reaction layer see the abstract; Figures 1, 2, and 5; column 5, lines 60-67; col. 6, ll. 41-61.

Addressing claim 2, although the Crismore patent does not state that the enzyme is coated with the additive, this limitation is anticipated because enzyme is mixed with the solution containing the additive for no less than 30 minutes. See col. 6, ll. 58-61.

Addressing claim 3, Crismore teaches glucose dehydrogenase for use in a glucose sensor wherein succinate is an additive added to the glucose dehydrogenase. See the abstract; Figures 1, 2, and 5; column 5, lines 60-67; and col. 6, ll. 41-61. Crismore does not mention that the additive is for stabilizing the enzyme; however, this feature is anticipated because it is a property inherent in succinate, as disclosed by applicant.

Addressing claim 4, for a glucose dehydrogenase composition containing a succinate see the abstract; Figures 1, 2, and 5; column 5, lines 60-67; and col. 6, ll. 41-61.

3. Claims 3 and 4 are rejected under 35 U.S.C. 102(e) as being clearly anticipated, with respect to claim 4, or anticipated, with respect to claim 3, by Wong et al.
(US 6,077,660).

Addressing claim 3, Wong teaches glucose dehydrogenase for use in a glucose sensor wherein succinate is an additive added to the glucose dehydrogenase. See the abstract; Figures 1, 3, and 4; column 8, line 60 – col. 9, line3; and col. 11, ll. 1-31. Wong does not mention that the additive is for stabilizing the enzyme; however, this feature is anticipated because it is a property inherent in succinate, as disclosed by applicant.

Addressing claim 4, for a glucose dehydrogenase composition containing a succinate see the abstract; Figures 1, 3, and 4; column 8, line 60 – col. 9, line3; and col. 11, ll. 1-31.
